

# Paragon's Home Artist Raku Kiln

## 120 Volt, Portable, Fun!

### Steve Jaskowak and his Home Artist Raku Kiln

"The Paragon Home Artist Raku kiln takes about 45 minutes to hit temperature," said Steve Jaskowak, a noted raku teacher in Carlstad, NJ.

"This kiln gives a real peaceful, quiet raku. I have it right next to me most of the time while I work. Unlike loud propane kilns, this one is inconspicuous.

"I think it's perfect for raku," said Steve. "It's great for doing raku demos. You don't need permits for propane. It is a great urban raku kiln for those who live in the city."

### A Portable Kiln

The Paragon Home Artist Raku kiln plugs into a 15 amp, 120 volt standard household outlet. A built-in luggage carrier snaps upright for easy moving.

"If you've got a 120 volt outlet, you can raku," said Steve.

### Digital Simplicity

The Home Artist Raku kiln operates with the simplicity of a microwave oven. The three button controller heats at the speed and temperature you select. Comes with a step-by-step instruction guide.

### Home Artist Raku Kiln Safety Features

Order the raku kiln safety lid switch. This is optional on the standard Paragon Home Artist kiln. "Even if you have the lid switch, you should unplug the kiln before removing the raku pots," said Steve Jaskowak. "This is for safety."

The stainless steel jacket is vented to lower the surface temperature. A latch holds

the lid securely closed. A safety toggle switch on the side of the electrical box shuts off power to the heating element. A built-in fuse protects the controller.

The firing chamber is made of space-age ceramic fiber. This insulation is noted for energy efficiency.

### Ordering information

Visit [www.paragonweb.com](http://www.paragonweb.com) for a list of Paragon Dealers and Distributors, or call us at 1-800-876-4328 for the one nearest you. Take your whole family for a demonstration of this exciting kiln. Get started today!
