

The QuikFire 6 High Speed Glass Kiln

Zero to 1000°F in five minutes!

The QuikFire 6 brings instant gratification to glass fusing, enameling, and china painting. Small glass pieces can be fired and cooled to room temperature in only 40 minutes. Small ceramic pieces take only 40 to 50 minutes. No more waiting to fill your larger kiln to test-fire a new technique or new glaze. Demonstrate the QuikFire 6 at craft shows, and crowds will gather.

The QuikFire 6 is an ideal way to introduce beginners to the world of high temperature art. What better way is there to expose people to your art than to let them see a red-hot kiln at work? The world of high temperature is fascinating, and the Paragon QuikFire 6 brings this to the beginner's tabletop at a modest price. The QuikFire 6 is a time machine that lets you see your new ideas in minutes instead of hours. It will take you on an accelerated journey into your imagination.

The QuikFire 6 is a ceramic fiber shell with an embedded element. It measures 6" x 6" x 6" inside. The shell rests on a ceramic fiber base with steel stand. The QuikFire 6 is rated to 2000°F. It fires on 120 volts and needs no other heating source. At only 1560 watts, it uses less power than many hair driers.

To see how your work is progressing, tilt the shell up an inch for several seconds. Read temperature at a glance with the built-in pyrometer, which indicates

when to start watching the ware inside the kiln. For European voltage, specify the QuikFire 6E.

QuikFire 6 Furniture Kit

2 C-2 Shelves One Haik Brush

1 lb. Bag Glass Separator

PCB-1 Power Control Box

Uses an infinite control switch to slow the QuikFire 6 for large, thick pieces. Simplifies enameling and decals. May be used for other kilns rated up to 120 volts, 15 amps.

PCB-1 Power Control Box
