

Innovative Paragon cone 10 kilns for potters

- The top row of wall bricks in the TnF-27-3 and Viking-28 is blank (no element grooves) to prevent brick damage.
- The patented spring-balance lids feel so light that you can lift the lid with one finger. Ask competitors if their lid spring includes a truss and floating lid, which allow for expansion.
- The Sentry digital controller is in the top of the kiln switch box where it is easier to operate. The Sentry is manufactured by the Orton Ceramic Foundation.
- Choose between the Type-K thermocouple or the optional Type-S.

The Dragon and Iguana front-loading kilns are a dream to load. They save on back muscles. Another easy-loading kiln is the TnF-27-3. This top-loading studio kiln is as short as a hobby kiln. Yet the 12-sided interior is a massive 8.11 cubic feet, slightly larger than a typical 10-sided 29" deep studio kiln.

The Viking-28 and Dragon use long-lasting mercury relays. All our cone 10 kilns fire with rugged 12-gauge elements.

The Dragon

- Cone 10, 2350°F
- A joy to load, without back strain!
- 9 cubic foot interior:
24" wide x 24" deep x 27" tall

Dragon
24" wide x 24" deep
27" high interior

The kilns in this ad are UL Listed to U.S. and Canadian safety standards.

Viking-28
28" wide
29" deep

- Heavy duty mercury relays
- 3" insulating firebrick and 1" non-organic block insulation in walls, top and door: 4" total thickness
- Sentry 2.0 controller with programmed cool-down

The Iguana

- Cone 10, 2350°F
- A joy to load, without back strain!
- 4.2 cubic foot interior:
18" wide x 18" deep x 22 1/2" tall
- 3" insulating firebrick

The Viking-28

- Cone 10, 2350°F
- 29" deep, 28" wide, 12-sided, 10.57 cubic feet
- Heavy duty mercury relays
- Paragon's exclusive, patented lid spring system

You will love the easy access switch box on the TnF-27-3 and Viking-28. It opens in seconds by removing 2 screws in the top.

TnF-27-3
28" wide
22 1/4" deep

- 2" row of blank bricks in the top of the walls for extra durability during loading
- Easy-access switch box
- 3" thick firebrick in walls, lid & bottom
- Sectional design for moving through narrow doorways
- Sentry micro processor controller mounted near top of switch box for easy operation.

The TnF-27-3

- Cone 10, 2350°F
- 22 1/4" deep, 28" wide, 12-sided, 8.11 cubic foot interior

- Paragon's exclusive, patented lid spring system
- 2" row of blank bricks in the top of the walls for extra durability during loading
- Sentry micro processor controller mounted near top of switch box for easy operation
- Easy-access switch box
- 3" thick firebrick in walls, lid & bottom
- Sectional design for moving through narrow doorways

Ask about the AOP vent, which controls the KilnVent. Choose to automatically turn off the vent at firing maturity or at the end of cooling. There is no extra charge for 208 volt, single and 3 phase wiring. All models can be wired for overseas electrical systems.

Iguana
18" wide x 18" deep
22 1/2" high interior
